***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-15, drawn to a high-speed multiplexer or system that includes a high speed multiplexer, including a local signal converter having a circuit branch, and an output pin coupled to the local signal converter, classified in class 370, subclass 357.
  - II. Claim 16, drawn to a method of selecting one from a plurality of high-speed digital input signals applied to a plurality of input pins, classified in class 702, subclass 191.
2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)).

In this case, the process as claimed, could be practiced by another materially different apparatus, for example, an apparatus that did not include a multiplexer, and more specifically, one that did not include a multiplexer that includes a local signal converter having a circuit branch with an output pin coupled to the converter.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 2857

3. A telephone call was made to Lance Kreisman on 9/30/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
